Software Engineer (L2)

SUMMARY

Software Engineer with 2+ years of experience in backend development, enterprise integrations and customer-facing engineering at OpsHub: Java and Spring Boot applications, core framework capabilities, and turning customer requirements into technical solutions. Expanding into AI engineering with LLM-powered agents, MCP-based integrations, RAG workflows and AI-assisted development.

TECHNICAL SKILLS

Languages & Backend: Java, Spring Boot, REST APIs, Reactive Programming (Mono/Flux), Concurrency
AI & LLM Engineering: LLM Agents, RAG, LangChain, LangGraph, Model Context Protocol (MCP), Dify, Guardrails
AI-Assisted Development: Claude Code, Antigravity, GitHub Spec Kit, Agentic Coding, Spec-Driven Development
Tools & Technologies: Git, IntelliJ IDEA, ELK Stack, Log Analysis

EXPERIENCE

OpsHub, Software Engineer (L2) May 2024 – Present

- **Customer Engineering & Solution Delivery:** Work directly with enterprise customers to understand requirements, design implementation approaches and resolve integration challenges through development and live debugging on customer calls; most issues resolved in the same meeting or by the next.
- **MBSE Connector Development:** Led the proof of concept for a Cameo connector, building capabilities beyond existing product functionality and demonstrating customer-requested use cases live.
- **Conditional Entity Type Movement:** Designed and implemented rule-based routing between entity types, with a UI aligned to the customer's mental model.
- **Core Framework Development:** Introduced metadata-driven method definitions that separate connector-specific logic from the core framework, improving extensibility.
- **Performance & Reliability:** Resolved heap-space failures at 100K+ entities and duplicate revision processing, improving synchronization reliability for customers.
- **AI-Assisted Engineering:** Built AI-assisted utilities that validate synchronized customer data against source systems and speed up investigation.
- **Hackathon Achievement:** 1st Runner-Up, 2025 company hackathon: co-developed a log traceability solution that cut log investigation from 10–15 minutes to a single click.
- **Mentoring & Knowledge Sharing:** Mentored a summer 2025 intern and a winter intern, guided two interns who built a user-count utility, and co-trained the Winter 2025 internship programming course.

OpsHub, Software Engineer Intern (Winter Internship) Jan 2024 – May 2024

- Implemented multi-level log filtering (class-level and thread-level) and REST APIs to manage logging configuration at integration-specific and global levels.

OpsHub, Software Engineer Intern (Summer Internship) Jun 2023 – Jul 2023

- Implemented PostgreSQL support for the Integration Manager installer and database migration utility.

PROJECTS

CampusFlow (In Progress) GitHub | Live demo

- Developing a school administration platform with Spec-Driven Development, turning business requirements into specifications, implementation plans and test cases.
- Designed an agentic workflow with Claude Code subagents for planning, implementation, testing and code review.

OmniCode (Working Prototype) GitHub | Demo video

- Built an LLM-powered code investigation system that lets a cloud reasoning model analyze a proprietary Java codebase without exposing its source code.
- Developed an MCP server with eight typed tools and guardrails: masking and scanning, restricted access, audit logging.

Document Q&A Chatbot (Dify)

- Built a RAG workflow in Dify that ingests Markdown documents and powers a document Q&A chatbot.

EDUCATION

Qualification	School / University	Board	Year	Score
B.Tech	Pandit Deendayal Energy University	–	2020 – 2024	CGPA 9.83
Higher Secondary (XII)	Puna International School	CBSE	2020	88.3%
Secondary (X)	Birla Sagar H.S. School	CBSE	2018	94.8%
